

Moisture Measurement Solutions

# CONCRETE

In business since 1965, Wagner Meters provides field-proven moisture measurement technology to help wood products manufacturing, woodworking, and wood flooring professionals improve their profits and reputations with superior moisture measurement instrumentation tools to assist in minimizing the risk of moisture-related failures. Wagner Meters' in-line moisture measurement systems and hand-held moisture meters are proven and trusted to provide consistently accurate moisture measurement readings deep into the wood...not just on the surface. Wagner Meters maintains a superior customer service reputation with highly trained and experienced product support professionals who go the extra mile to help customers find a solution, even if it involves referral to another company.

Moisture Measurement Solutions

WOOD MOISTURE  
MEASUREMENT TOOLS

**Orion® 910**  
Deep Depth Pinless Wood  
Moisture Meter Kit

The Orion 910 incorporates IntelliSense™ technology, a rugged design, and industry-exclusive true in-the-field calibration capability provided by the included On-Demand Calibrator.

**Orion® 920**  
Shallow Depth Pinless Wood  
Moisture Meter Kit

The Orion 920 is designed exclusively for shallow measurement of moisture content from the surface down to .25" (6.4mm) deep inside wood or other material. The 920 is ideal for applications where accurate moisture readings from thin wood pieces or coatings are critical to success.

**Orion® 930**  
Dual Depth Pinless Wood  
Moisture Meter Kit

The Orion 930 dual depth meter gives the full functionality of both the Orion 910 and 920. This versatility makes it ideal for flooring, quality control, woodworking, and inspection applications.

**Orion® 940**  
Data Collection Pinless Wood  
Moisture Meter Kit

The Orion 940 gives the full capabilities of the 930 while adding data collection and storage capabilities vital to Quality Control and home or property restoration applications.

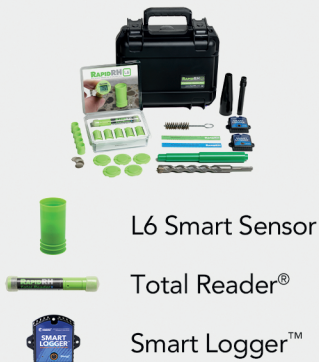

**Orion® 950**  
Smart Pinless Wood Moisture  
Meter with Temperature RH Kit

The Orion 950 incorporates all the outstanding features of the 910, 920, 930, and 940 while adding breakthrough new functions like Bluetooth connectivity to free smart device apps, ambient temperature/RH sensor, and Equilibrium Moisture Content (EMC) calculation.

**Smart Logger™** An Ambient RH & Temperature Data Logger

Whether you are renovating or building, monitoring ambient temperature and humidity conditions at your project can help you avoid costly and time-consuming damage as well as expensive callbacks later. The only way to be sure service conditions remain is through constant observation and recording. The Wagner Meters Smart Logger monitor and the Smart Logger app are your eyes on the job site 24 hours a day.

CONCRETE MOISTURE  
MEASUREMENT TOOLS

**Rapid RH® L6**  
Concrete Moisture Test

An enhanced version of the already popular Rapid RH system, L6 consolidates many concrete moisture testing features into a simpler process while featuring advanced technology that makes reporting faster, easier, and more reliable, even in concrete with higher relative humidity.

**DataGrabber® & DataGrabber®  
with Bluetooth®**

DataGrabber data loggers will enhance your documentation of L6 Smart Sensor readings by automating the reading collection process. The DataGrabber with Bluetooth features a built-in wireless connection to your smart device. The smaller DataGrabber connects with your smart device by using the Total Reader as a Bluetooth conduit.

**DataMaster™ L6**  
Mobile App

The DataMaster L6 app connects via Bluetooth to the Rapid RH Total Reader or the DataGrabber with Bluetooth for a completely wireless system of reading, recording, and reporting your concrete slab moisture test data.

**C555**  
Handheld Concrete  
Moisture Meter Kit

The C555 Concrete Moisture Meter provides fast, non-destructive preliminary moisture measurements on smooth, firm concrete. With its built-in ambient sensors and included On-Demand Calibrator, the C555 comes with everything you need to conform fully with ASTM F2659.

**Floor Sentry**

Monitor the temperature and relative humidity of your wood floor and concrete subfloor months or years after installation with the Bluetooth-enabled Floor Sentry. Embed the credit card-sized sensor in the underside of a wood floor plank and collect readings through a wireless connection to the Wagner Sentry app.
